Environmental Capability

First-class environmental knowledge is crucial to the success of numerous engineering and construction projects as well as existing operations. "Environmental sustainability is important to us and to our clients," says MD Peter George. "So we offer a 'cradle-to-grave' service, from conception and production through to rehabilitation and closure."

Regardless of the depths of a client's needs, Rapallo pursues best practice standards while maintaining open and honest relationships with clients and government agencies. The team is committed to helping clients meet the challenges and opportunities of this highly dynamic area and, when necessary, will work closely with other divisions, as well as a network of consultants, to guide them through the approvals process.

Rapallo specialises in working in remote areas. Our fauna team has experience with vertebrate and invertebrate survey throughout the Goldfields, Pilbara, Kimberley and South-West and ornithology experience in Australia, Africa and the United Kingdom. Our division has worked with the Department of Industry and Resources and the Department of Environment and Conservation and has links with the Western Australian Museum.

The Carbon Pollution Reduction Scheme is the federal government's plan to reduce Australia's greenhouse gas emissions. The first stage of the scheme obliges companies to report annually under the National Greenhouse and Energy Reporting System. We can help clients navigate this challenging process by delivering tailor-made solutions that will help manage energy use, improve efficiency and reduce emissions.

- Ecological Survey
- Environmental Impact Assessment
- Mining Proposal
- Exploration Environmental Approvals
- Clearing Permits
- Environmental Management
- Significant Species Management Plans
- Government and Community Consultation
- National Greenhouse and Energy Reporting System (Carbon Pollution Reduction Scheme)
- Monitoring
- Project Management
- Auditing
- Annual Environmental Reports
- Decommissioning and Closure Support
- Waste Rock Characterisation
- Environmental Data Solutions
- Pipeline Construction Management
- Trouble Shooting
