

ENGINEERING FOR LOCAL GOVERNMENT Capability Statement

Rapallo is a leading Western Australian engineering company with a strong reputation for technical excellence, client-focus and innovation. We build long-term alliances through outstanding delivery on a range of services to the resources sector, government and associated industries.

Engineering for Local Government Capability

Rapallo was originally established in 1987 in Kalgoorlie, Western Australia, by Andy George, a highly qualified engineer with extensive experience in the gold and nickel mining industries across Australia. Since then, Rapallo has grown into a leading-edge company with a reputation for building strong, long-term relationships with its clients in the resource sector, government and associated industries. The company offers services that encompass all engineering disciplines, project and construction management, asset and resource management, and environmental consultation and management. With more than 80 staff, drawn locally and from interstate and overseas, Rapallo's sustained growth is the result of an unswerving commitment to helping clients meet diverse challenges.

"Our people are the key to our success and our most important asset," says Managing Director Peter George. "When it comes to our staff or our clients, we believe in strong partnerships. Working in partnership with our clients, we bring knowledge, skills and passion to any project."

Rapallo is still privately owned and now run by a senior management team with a vast combined experience in the areas it services. With bases in both the Goldfields and Perth it enables clients to benefit from local knowledge as well as global expertise.

Rapallo is committed to making an outstanding contribution to the success of local government. Our aim is to work with and on behalf of councils to:

- Provide civil, structural, mechanical, electrical and project management engineering and environmental services
- build a strong and positive reputation for local government with the public
- support councils and their partnerships to continuously improve and be innovative.

We provide engineering services at a level that support and are complementary to regional and local councils.

Rapallo has a track record of excellence in all engineering disciplines and provides a 'cradle to grave' service from project conception through to closure. The engineering division has the capability to guide a project through its entire life cycle, from feasibility studies and design engineering through to developing concepts and completion. A key feature of this team's service is a flexible approach that allows custom-made solutions to challenges as they arise. When necessary, staff work closely with Rapallo's other divisions to ensure projects are completed with the best possible outcomes.

For infrastructure design and project management such as structures, roads, bridges, drainage and small sub-divisions, Rapallo can provide Engineering Management services including:

Civil/Structural Engineering

We strive to provide practical and commercially sound design solutions that meet Australian standards as well as other relevant design and safety requirements.

Mechanical Engineering

Services include feasibility and scoping studies, detailed design, project management, construction and trouble shooting.

Electrical and Instrumentation Engineering

We have considerable design, auditing, management and trouble shooting experience in HV and LV.

Engineering Drafting

Our drafting teams in Perth and Kalgoorlie are experienced in mechanical, civil, structural and electrical drafting. Services range from simple sketches to full 3D design drawings for contractual construction projects.
